

Trend Micro™

ScanMail™ Suite for Lotus™ Domino™

High Performance Mail Server Security with Minimal IT Impact

Today's aggressive, subversive email threats demand powerful, multi-layered messaging security to protect workgroup collaboration environments like Lotus™ Domino™. While gateway security is needed to stop viruses and other threats at the perimeter, mail server security is critical for inspecting inbound and stored mail, plus internal communications.

ScanMail™ for Lotus™ Domino™ offers advanced virus protection and content security for Lotus Domino environments. It scans email in real time for viruses and spyware hidden within email attachments and databases. The comprehensive ScanMail Suite also provides anti-spam and content filtering for additional protection against high volumes of unwanted bulk email and increasingly malicious blended attacks. Unlike other security products, ScanMail Suite for Lotus Domino is specifically designed as a native Lotus Domino server application and is optimized for high-performance scanning.

KEY FEATURES

High-performance Scanning and Virus Elimination

- Detects and removes malware hidden within database and email attachments
- Combines pattern-recognition, behavior analysis, and rules-based technologies
- Employs multi-threading to maximize scan efficiency and minimize server impact
- Delivers malware alerts for prompt notification of security threats

Advanced Antispam, Antiphishing, and Content Filtering

- Utilizes pattern matching, heuristics, URL detection and other techniques to stop spam
- Identifies and blocks fraudulent phishing email to prevent theft
- Offers flexible content filtering based on keywords, regular expressions or true file type
- Reduces threat exposure by stopping email-borne blended threats

Powerful Configuration and Management

- Shares configuration choices between servers and server groups
- Enables automated tasks and scripted installation
- Supports remote management from any Lotus Notes or Domino Administrator client

Domino Optimization

- Features broad OS support
- Enables easy installation and upgrade deployment
- Offers full Lotus Domino cluster support
- Provides an intuitive "look and feel" as a native Lotus Domino application

Trend Micro Control Manager™

- Simplifies administration with centralized management
- Provides a single console for managing Trend Micro security deployed throughout your enterprise
- Deploys automatic updates and provides centralized reports

SOFTWARE

Protection Points

- Mail Server

Threat Protection

- Antivirus
- Antispyware
- Antispam
- Antiphishing
- Content Filtering

KEY BENEFITS

- Comprehensive protection against the wide range of spam, malware and blended threats
- High performance scanning for negligible impact on server performance
- Centralized management and flexible scheduling for low administration
- Broad platform support enables customers to use the OS that best fits their needs

“When we deployed Trend Micro ScanMail™ for Lotus™ Domino™, it was our first experience with Trend Micro solutions and the Trend Micro support team. ScanMail gives us much more protection for our messaging systems. The deployment was so easy that we began talks with Trend Micro about endpoint security solutions.”

— Paul Key, IT Security Manager
Wincanton

MINIMUM SYSTEM REQUIREMENTS

For the most detailed and up-to-date system requirements, go to the [Trend Micro Update Center](#) and download the Administrator's Guide for your specific version of ScanMail for Lotus Domino. Support for Domino 8 with z/OS and z/Linux is expected to be available Q2, 2008.

	Domino Release	CPU	Memory (minimum/recommended)	File System (minimum for program/temporary)	Disk Space (per partition)
Microsoft Windows					
Microsoft Windows Server 2003 Standard/Enterprise with SP 1/2	Domino 8, 7 & 6	Intel Pentium™ IV Processor 1.3Ghz or higher	256MB/512MB	<ul style="list-style-type: none"> • 200MB for Program Files • 100MB for Temporary Files 	55MB
